MOTO
TRAINER 

Moto Trainer® represents the training revolution for riders.
Now you can ride your motorcycle and train everywhere.
www.mototrainer.it/en

“Moto Trainer means revolution and represents the future.”

MANUEL POGGIALI
2 TIMES WORLD CHAMPION

“It is a very efficient tool to face a race.”

A handwritten signature in black ink, which appears to be 'M. Poggiali', with the number '44' and the year '2002' written below it.

Moto Trainer is the best motorbike simulator based on an international patent

FEATURES

Use your bike

Suitable for all sports bikes, including yours.

Lean up to 50°

Train on all tracks in the world by leaning up to 50° safely

Easy to install

Quick installation. In just 30 minutes you can have your trainer ready to use.

Easy to move

The low weight and the wheels allow you to move the Moto Trainer easily.

Affordable price

The price of the basic model is € 4900. All models can be updated to the higher version.

Real riding experience

The experience that you feel riding your motorbike on the Moto Trainer is unique.

Open source video library

You can train on any circuit in the world. Upload the onboard video you prefer, including yours own.

Software with 4 levels of difficulties

Based on your riding skills, you will receive help or corrections by the software. Be careful not to fall!

Telemetry

With the Simulator version you will have the opportunity to measure your performance

Ride your bike & Get trained

Adjustable for all motorbikes

MTS System	Transport prices e VAT excluded	4900 €	10900 €

MTS is a software developed by our engineers capable of playing any onboard video, where you can save on a telemetry master track. This means that you can load any circuit (track and road) and motorbike you want. Once Master Track Telemetry has been saved, the following riders must replicate the video in the most faithful way to the reference telemetry. The goal is to replicate as much better as you can the telemetry of the onboard video. The MTS software will analyze the rider's performance by monitoring the accelerator, front and rear brakes, gearbox and trajectories. It is possible to choose the number of laps.

Moto Trainer

SIMULATOR Top *

Perfect for the user who wants to train and faithfully reproduce all the movements of the fast driving.

EAGLE

Ideal for those looking for maximum performance and want to compete Online against others

Mission

The goal of Moto Trainer® is to allow everyone to use their bike on all the circuits of the world, at an affordable price, and train their body and mind.

We believe that the thrill of riding your bike more often helps anyone to get stronger and feel better. In this way distances and weather conditions will no longer be a problem.

Details

Use your motorbike, load it on the patented mechanism, lock the front wheel and choose your favorite circuit.

Timing

Structure assembly time: 30 min

Bike installation / uninstallation : 5 min

Sensors installation time: 20 min

Measure

Operation mode area: 240x240cm

Shipping Box: 127x96x100cm

Weight

MT Basic

200kg

MT Simulator and Eagle

250kg

Based on the difficulty level set between beginner, intermediate, expert and rider, if the error is greater than allowed, the MTS software will stop the lap showing a crash and the error log.

When the rider performs the exercise correctly, MTS software will show the telemetry results at the end of the lap giving a score based on the correctness of the rider's performance.

This result will be added to a ranking.

* Compatible with Xbox and Pc games
