Moto Trainer® represents the training revolution for riders. Now you can ride your motorcycle and train everywhere. www.mototrainer.it
Moto Trainer is the best motorbike simulator based on an international patent.

**FEATURES**

- **Use your bike**
  - Suitable for all sports bikes, including yours.

- **Easy to move**
  - The low weight and the wheels allow you to move the Moto Trainer.

- **Open source video library**
  - You can train on any circuit in the world. Upload the onboard video you prefer, including yours.

- **Lean up to 50°**
  - Train on all tracks in the world by leaning up to 50° safely.

- **Affordable price**
  - The price of the basic model is € 4900. All models can be updated to the higher version.

- **Software with 4 levels of difficulties**
  - Based on your riding skills, you will receive help or corrections by software. Be careful not to fall!

- **Telemetry**
  - With the PRO and Simulator version you will have the opportunity to measure your performance.

**WHO**

- **MOTORCYCLE MANUFACTURER**
  - Let’s try your prospects their next bike.

- **RACE TEAM**
  - Show your bike in action, your sponsor will appreciate.

- **RIDER**
  - Train your brain and your body to face the next race.

- **RIDING SCHOOL**
  - Teach your student the right movements on a real bike.

- **BIKER**
  - Save money and try all the best tracks from your home.

**WHY**

- **GREAT FOR:**
  - Workout
  - Learn new circuits
  - Injury recovery
  - Riding position improvement
  - Entertainments

**BENEFITS & VALUES**

- **Throttle**
- **Gears**
- **Front/Rear Brakes**
- **Lean Angle**

**GREAT FOR:**

- Workout
- Learn new circuits
- Injury recovery
- Riding position improvement
- Entertainments

**Measure your performance by using telemetry**

- Throttle
- Front/Rear Brakes
- Lean Angle

**RIDE YOUR BIKE**

- **OUTDOOR**
- **INDOOR**
- **PERFECT FOR LEARNING**
- **SMART DESIGN**

- Ride your bike & Get trained
- Adjustable for all motorbikes

- Moto Trainer is the best motorbike simulator based on an international patent.

**Details**

Use your motorbike, load it on the patented mechanism, block it by locking the front wheel and choose your favorite circuit.

- **Operation mode area:** 240x240cm
- **Shipping Box:** 127x96x100cm
- **Structure assembly time:** 30 min
- **Bike installation / uninstallation:** 5 min
- **Sensors installation time:** 20 min
- **MT Basic and Professional:** 200kg
- **MT Simulator:** 250kg

**Mission**

The goal of Moto Trainer® is to allow everyone to use their bike on all the circuits of the world, at an affordable price, and train their body and mind.

We believe that the thrill of riding your bike more often helps anyone to get stronger and feel better. In this way distances and weather conditions will no longer be a problem.

MT Professional and MT Simulator models have included MTS software

MTS is a software developed by our engineers capable of playing any onboard video, where you can save on a telemetry master track.

This means that you can load any circuit (track and road) and motorbike you want.

Once Master Track Telemetry has been saved, the following riders must replicate the video in the most faithful way to the reference telemetry.

The goal is to replicate as much better as you can the telemetry of the onboard video. The MTS software will analyze the rider’s performance by monitoring the accelerator, front and rear brakes, gearbox and trajectories. It is possible to choose the number of laps.

Based on the difficulty level set between beginner, intermediate, expert and rider, if the error is greater than allowed, the MTS software will stop the lap showing a crash and the error log.

When the rider performs the exercise correctly, MTS software will show the telemetry results at the end of the lap giving a score based on the correctness of the rider’s performance.

This result will be added to a ranking.

MT Simulator, the most complete simulation model on the market, in addition to monitoring the data highlighted above, is also equipped with devices that increase the riding thrill pressing the front fork when braking and pushing the bike upwards when open the throttle with the bike leans.
Moto Trainer® represents the training revolution for riders. Now you can ride your motorcycle and train everywhere.
