2020 Award Winner

**Skincare Products of the Year
Germany**

Skincare Products of the Year

REX-KARA Beauty Systems GmbH

Bad Waldsee, Germany

Founded in 2010, REX-KARA's cosmetics represent a quantum leap in the industry, using the latest technology for maximum results whilst avoiding harsh chemicals.

A pioneer in apparatus skincare and cosmetics, REX-KARA Beauty Systems GmbH specialise in naturopathy treatments involving ultrasound, galvanic treatments and light therapy, effectively integrating them into daily skincare routines with their SPI beauty system. This SPI technology uses sonophoresis (ultrasound), photon light therapy and iontophoresis to noticeably improve skin and increase youthfulness, offering five pre-set programmes in three strength levels alongside 18 treatment options. Rather than working on only the top level of the skin like many conventional skincare products, it is supported by biophysical processes for an unparalleled deep therapy and regeneration of the skin's elasticity, which has noticeable anti-ageing effects.

Founded in 2010, REX-KARA's cosmetics represent a quantum leap in the industry, using the latest technology for maximum results whilst avoiding harsh chemicals. Though their highly concentrated products utilise a wide range of active ingredients – such as hyaluronic acid and collagen, retinol, SYN®-AKE and Gatuline® Expression – the SPI beauty system uses 0% polyethylene glycols (PEGs), silicones, parabens, dyes and mineral oils, whilst also avoiding the need for micro-invasive or plastic surgery interventions. The SPI beauty system offers both inductive and USB charging for the ultimate ease of use whilst at home and travelling.

The judges applaud REX-KARA for their effective and innovative cosmetic solutions, which have achieved 100% efficacy in recent studies and have been proven to reduce wrinkles, under-eye shadows, swelling, impurities and oversized pores. They also commend founder Bettina Gufler for recognising the limits of conventional cosmetics, and working with the best in the industry – from doctors to pharmacists – to create a product that can be used at home, but boasts results more likened to those achieved through procedures at beauticians and medical centres. The team at REX-KARA also offer constant support to both existing and potential customers.

Judge Andrew Walsh commented: "REX-KARA use light and energy to tackle the challenges of traditional cosmetic products, after extensive research and development with the most experienced in the industry. They are leading the way in innovative beauty treatments, and their satisfied customers consistently reaffirm this."
