

WDA Barrel Washer

Wyma's Barrel Washer gently and effectively washes fresh produce while removing soil and small stones.

Potatoes • Carrots • Parsnips • Swedes • Turnips • Beetroot • Celeriac and more

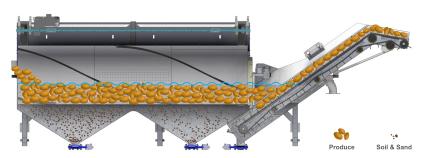

Our WDA Barrel Washer is a cost-effective machine. It effectively and gently washes fresh produce while removing soil and small stones. Produce can be partially or fully submerged during washing.

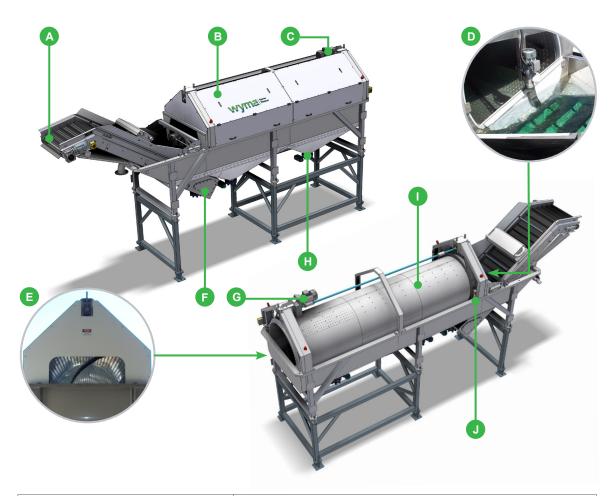

As the perforated barrel rotates, vegetables rub against each other and against the barrel for a gentle clean. Agitation bars inside the barrel maximise washing performance.

Soil and debris collect in the hoppers underneath the barrel. Dump valves regularly clear debris build-up. Cleaning bars can be fitted to rinse the inside of the barrel.

The outfeed elevator allows you to choose the outfeed height for your produce and provides gentle handling.

Features & Benefits

Gentle produce handling, at high speeds if needed. Outfeed height can be set to suit your needs. Gooseneck available* for gentle drop onto next piece of equipment. B Removable side panels Easy access to internal parts. C Variable speed controlled barrel Change produce wash intensity by adjusting barrel rotation speed. Holds produce in the barrel for a more intense wash. F Agitation bars inside the barrel Gives the best cleaning results. F Inspection hatches Quick and easy cleaning and maintenance access. G Drive system positioned out of the water Water H Automatic dump valves* Controlled, periodic removal of sand and dirt. I Perforated barrel Produce can run partially or fully submerged. Barrel stabiliser and alignment rollers Automatic barrel rinsing and cleaning.		
Gooseneck available* for gentle drop onto next piece of equipment. B Removable side panels Easy access to internal parts. C Variable speed controlled barrel Change produce wash intensity by adjusting barrel rotation speed. Holds produce in the barrel for a more intense wash. E Agitation bars inside the barrel Gives the best cleaning results. F Inspection hatches Quick and easy cleaning and maintenance access. G Drive system positioned out of the water Water H Automatic dump valves* Controlled, periodic removal of sand and dirt. I Perforated barrel Produce can run partially or fully submerged. Barrel stabiliser and alignment rollers Automatic barrel rinsing and cleaning.	A Outfeed elevator	Gentle produce handling, at high speeds if needed.
B Removable side panels Easy access to internal parts. C Variable speed controlled barrel C Change produce wash intensity by adjusting barrel rotation speed. D Adjustable outfeed gate (manual or automatic*) Holds produce in the barrel for a more intense wash. E Agitation bars inside the barrel Gives the best cleaning results. F Inspection hatches Quick and easy cleaning and maintenance access. Easy access. Longer life for drive system. H Automatic dump valves* Controlled, periodic removal of sand and dirt. Perforated barrel Produce can run partially or fully submerged. Barrel stabiliser and alignment rollers Automatic barrel rinsing and cleaning.		Outfeed height can be set to suit your needs.
C Variable speed controlled barrel Change produce wash intensity by adjusting barrel rotation speed. D Adjustable outfeed gate (manual or automatic*) Holds produce in the barrel for a more intense wash. E Agitation bars inside the barrel Gives the best cleaning results. F Inspection hatches Quick and easy cleaning and maintenance access. Easy access. Longer life for drive system. H Automatic dump valves* Controlled, periodic removal of sand and dirt. I Perforated barrel Produce can run partially or fully submerged. J Barrel stabiliser and alignment rollers Automatic barrel rinsing and cleaning.		Gooseneck available* for gentle drop onto next piece of equipment.
D Adjustable outfeed gate (manual or automatic*) E Agitation bars inside the barrel Gives the best cleaning results. F Inspection hatches Quick and easy cleaning and maintenance access. G Drive system positioned out of the water Longer life for drive system. H Automatic dump valves* Controlled, periodic removal of sand and dirt. I Perforated barrel Produce can run partially or fully submerged. J Barrel stabiliser and alignment rollers Automatic barrel rinsing and cleaning.	B Removable side panels	Easy access to internal parts.
(manual or automatic*) E Agitation bars inside the barrel Gives the best cleaning results. F Inspection hatches Quick and easy cleaning and maintenance access. Easy access. Longer life for drive system. H Automatic dump valves* Controlled, periodic removal of sand and dirt. I Perforated barrel Produce can run partially or fully submerged. J Barrel stabiliser and alignment rollers Automatic barrel rinsing and cleaning.	C Variable speed controlled barrel	Change produce wash intensity by adjusting barrel rotation speed.
F Inspection hatches Quick and easy cleaning and maintenance access. G Drive system positioned out of the water Longer life for drive system. H Automatic dump valves* Controlled, periodic removal of sand and dirt. Perforated barrel Produce can run partially or fully submerged. J Barrel stabiliser and alignment rollers Barrel stays stable as it rotates. Automatic barrel rinsing and cleaning.		Holds produce in the barrel for a more intense wash.
G Drive system positioned out of the water Longer life for drive system. H Automatic dump valves* Controlled, periodic removal of sand and dirt. Perforated barrel Produce can run partially or fully submerged. J Barrel stabiliser and alignment rollers Barrel stays stable as it rotates. Automatic barrel rinsing and cleaning.	■ Agitation bars inside the barrel	Gives the best cleaning results.
water Longer life for drive system. H Automatic dump valves* Controlled, periodic removal of sand and dirt. Perforated barrel Produce can run partially or fully submerged. Barrel stabiliser and alignment rollers Barrel stays stable as it rotates. Automatic barrel rinsing and cleaning.	F Inspection hatches	Quick and easy cleaning and maintenance access.
H Automatic dump valves* Controlled, periodic removal of sand and dirt. Perforated barrel Produce can run partially or fully submerged. Barrel stabiliser and alignment rollers Barrel stays stable as it rotates. Automatic barrel rinsing and cleaning.		Easy access.
 Perforated barrel Produce can run partially or fully submerged. Barrel stabiliser and alignment rollers Barrel stays stable as it rotates. Automatic barrel rinsing and cleaning. 		Longer life for drive system.
J Barrel stabiliser and alignment rollers Barrel stays stable as it rotates. Automatic barrel rinsing and cleaning.	★ Automatic dump valves*	Controlled, periodic removal of sand and dirt.
rollers Barrel stays stable as it rotates. Automatic barrel rinsing and cleaning.	■ Perforated barrel	Produce can run partially or fully submerged.
	9	Barrel stays stable as it rotates.
	Internal cleaning bars	Automatic barrel rinsing and cleaning.
Reduces manual cleaning time.		Reduces manual cleaning time.
