

Fairbanks – Chena River

The Chena River is a tributary of the Tanana River in the interior of Alaska. The Tanana empties into the Yukon after a 2,300 mile journey. The Chena is 100 miles within a State Recreation Area and the river that flows through Fairbanks. Because of flooding in the past the river includes a flood control project and dam. The Chena is rich with fishing from chum and king salmon to northern pike and other fish. Boating is available, but the Chena also has logging, swift streams, vegetation and shallow concerns. The photos shown are from a paddle wheel ride from Fairbanks to a fork and back. The trip includes many homes and a culture center to share Native American ways.

Small aircraft are common in Alaska as a means of travel.

An amazing style of homes for year-long living along the river.
