

PROCUE
SIMULATOR MOTION WORKFLOW

Maximise simulator productivity

State-of-the-art optimiser for extracting maximal **value** from motion cueing algorithms.

Simulator studies of higher **quality** and an increased output of actionable insights.

Fully **realise** the promise of digitisation and digital twins.

Minimise simulator downtime

Keep your cockpit out of the buffers and in motion through **support** for arbitrary workspace constraints.

Manage and recall cueing parameter sets allowing for better **consistency** and **efficiency**.

Accelerate research & development

Make immediate use of built-in perception models, cost functions and cueing algorithms to accelerate your journey to the **state-of-the-art**, all drawn directly from the scientific literature.

Integrate proprietary technology and processes and go **beyond** the bleeding edge.

Outcue the competition
