Knowledge is none of the classical factors of production land, labour and capital. However, nowadays it is the most relevant factor in many branches. Who has it on one's command and knows how to apply it, doesn't have to worry too much about the other factors.

Take care that your organisation stays **competitive** and **excels** by active knowledge management **also in future**. Also you can achieve **productivity gains** of 5% up to over 25%. The earlier you start the better.:

It is a process and does not happen from one day to the other!

We support you in the following areas:

ISO 9001:2015: We advise you how the requirements regarding the knowledge and competence management in the new norm can be implemented in your organisation.

Intellectual Capital Statement: How does your business strategy look like? Do you know what you still have to know? An "Intellectual Capital Statement – Made in Germany"* is helping you.

Workshops: Knowledge and awareness of knowledge becomes obvious in workshops very often. Each situation requires a special approach.

Collaboration Software offers stunning possibilities. Knowledge can be captured target-oriented, shared, searched for and distributed easily.

Introduction in Organisations: Some relevant success factors have to be taken into account which we will advise you off. Many existing processes and minor applications/programs can be incorporated at first and later be substituted completely. This facilitates processes and saves cost. During incremental introduction and an associated analysis the relevant factors for value added become apparent quickly. The focus onto these factors increases the acceptance of the employees and improves the competitive position.

Change Management: Company cultures and traditions can be obstacles for a successful implementation of knowledge management. We help you to overcome those.

Use Cases: Each organisation will find it's special own "Use Cases". Our comprehensive catalogue helps with the selection and idea generation.

* The „Intellectual economics Capital Statement – Made in Germany“ has been developed by the Fraunhofer Institute under the umbrella of the German ministry of. Thomas Röllecke is certified „Intellectual Capital Statement“ moderator.
