The 2022 Brazilian Presidential elections concluded with the victory of former president Luiz Inácio Lula da Silva. However, he was sentenced for 12 years in prison for his involvement in the Operation Car Wash corruption scandal that rocked Brazil in 2014. Many view his conviction as a political “witch hunt.” In 2021, the Supreme Court annulled these charges, allowing Lula to run for president in the 2022 elections.¹ The electoral system in Brazil is a two-round system, like that used in France. To win, a candidate needs more than 50% of the popular vote to win the election. If no candidate receives such support, the top two candidates from the first round proceed

to a runoff election. The first round was held on October 1, 2022, with Lula de Silva receiving 48.43% of the vote and incumbent president Jair Bolsonaro receiving 43.2% of the votes.\(^2\)

The second round occurred on October 30\(^{th}\), with Lula receiving 50.9% of the votes and Bolsonaro receiving 49.1%. Lula was sworn into office on January 1\(^{st}\), 2023. Like Trump, Bolsonaro also claimed that the elections had fraudulent behavior, and unsuccessfully sought an investigation.\(^3\) On November 22, 2022, Macelo Bessa, the lawyer representing Bolsonaro, submitted a request to the electoral tribunal claiming that the voting machines are untrustworthy. Many of his supporters have protested the results, calling it a “stolen” election and argued for the military to intervene and “save Brazil.”\(^4\) The head of Brazil’s electoral court has rejected the petition, calling it “ostensibly conspiratorial toward the democratic rule of law.”\(^5\)

**Lula’s Record**

On the political spectrum, Lula is a social democrat, with his positions generally aligning on the centre-left. Lula’s first presidency was part of the broader Latin American “Pink Tide” that brought leftist governments to power across the region starting in the early 2010’s. In 1980, Lula founded the Workers’ Party, which was a grand coalition of trade unions, church activists, intellectuals, and Trotskyites, making it the first major socialist party in the country’s history.

During his time in office, Lula was instrumental in reducing the vast socioeconomic inequalities that plagued the country.\(^6\) Crucially, he was key to cutting the level of deforestation in the Amazon Rainforest. During his second term in office, the rate of deforestation had dropped by about 67%.

On foreign policy, Lula was influential in reaching out to non-Western developing economies, such as the BRICS (Brazil, Russia, India, China, South Africa). In addition, he increased Brazil’s role in the world by actively engaging in nuclear diplomacy between Iran and the West and on many occasions, opposed unilateral American foreign policy actions.\(^7\)

Even today, “Lula and his party still carry a legacy of anti-Americanism and they tend to see conflicts, like the Ukraine war, through the eyes of the traditional non-aligned movement.” The prospective Brazilian foreign minister has argued that while Russia’s actions should be condemned, sanctions do not solve the problem. With rising tensions between the US and China, Brazil’s interest is to balance between the two and not take sides.\(^8\)

**Climate Change**

Lula’s victory is a positive development for those seeking to mitigate the impact of climate change. Speaking at the COP27 climate summit in Egypt, president-elect Lula told the audience that “Brazil is back,” and that “there is no climate security for the world without a protected

Amazon.” Under his Government, climate change will be the highest priority. These comments are in stark contrast to the policies of the Bolsonaro government. Under Bolsonaro, about 13,000 square miles of trees were cut down in the Amazon Rainforest from 2019-2020. Nevertheless, it is too early to be optimistic. Lula will face considerable domestic opposition from the Bolsonaro friendly Congress and the country’s powerful mining and logging industries.

A Pink Tide 2.0?

Lula’s victory took place within the wider context of other left-wing leaders getting elected in Latin America. In Colombia Gustavo Petro got elected while Gabriel Boric came to power in Chile. In addition, Evo Morales, AMLO, and Fernandez won in their respective countries. Unlike the prior pink tide, this left-leaning turn is “less coordinated,” than with the first ‘pink tide. This entire time “the right was in power in almost all countries but... these presidents failed to provide change.” Bolsonaro’s poor response to the Covid-19 pandemic was one of the many factors influencing his defeat.

In addition, while many of these leaders have leftist positions economically, they have conservative stances on social issues. Lula has revealed his personal opposition to abortion but believes that the public should be able to choose. There is not “a homogenous progressive axis

from Mexico City to Santiago. If anything, there are even more variations than in the past.” 14 Lula himself has admitted that despite winning the election, far-right ideology is “still alive.” 15 Crucially, the election of Giorgia Meloni in Italy illustrates that right-wing populists still hold influence in global politics.
