

**** SIZE MATTERS, WHEN IT COMES TO
CYLINDERS! XJN SERIES ø160-320 ****

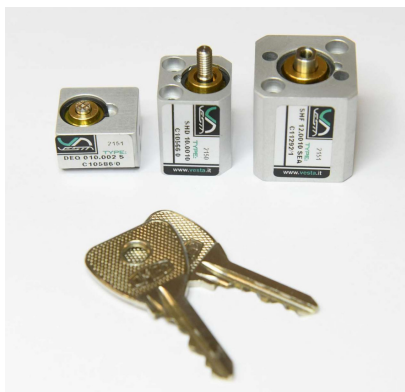

When *dimensions matter*, Vesta is ready to deliver! From precision micro cylinders all the way up to big size actuators for heavy industrial applications, Vesta can cover **all pneumatic automation needs**, with standard and custom solutions.

Vesta XJN series is the renewed product line of ISO 15552 pneumatic actuators.

Construction features of the series: diecast alloy painted heads, tie-rods and anodized aluminium barrel, chromium-plated steel piston rod. The combination of lip seals on the piston, self lubrication and a long guiding high-resistance brush guarantee great performances for standard diameters **Ø160, Ø200, Ø250 and Ø320**. FKM Viton seals for high temperatures are available as option.

Find more about XJN series

Vesta's experience in manufacturing quality cylinders don't stop at big sizes, it reaches all the way down to **micro dimensions**: Vesta Custom mini cylinders ensure high-precision performances with extremely small dimensions, with diameters starting from Ø10mm. Since many years, they are requested across the world in specific applications in different fields: from the pharmaceutical industry and lab analysis, to assembly lines of small electronics components in clean environments, such as circuit boards. Strokes, dimensions and functions can be customized according to the application.

Vesta Automation: because size matters, but customers' satisfaction matters even more!
